1. Aggressive breast cancer linked to obesity-driven diabetes

More than 120 million Americans suffer from diabetes or Pre-diabetes. Triple-negative breast cancer (TNBC) is the most aggressive form of breast cancer, and TNBC patient with obesity-driven diabetes often have worse outcomes.

Anew study by researches from Boston University chobanian and Avedisian School of Medicine helps explain why this happens and suggests a potential way to improve treatment for these patients.

At the present, oncolonist do not consider patients with breast cancer and obesity-driven diabetes differents in any significant way from patients with breast cancer who are other wise healthy.

The new study, "Insulin Resistance increases TNBC Aggressiveness and Brain metastasis via Adipocyte-derived Exosomes," published in Molecular cancer Research, shows that diabetes the biology of breast cancer, suggesting the need for special consideration for patients who are at much higher risk for brain metastasis. and should be monitored and treated differently than most breast cancer patients.

"We hope our study will lead to better treatments for patients with aggressive breast cance especially those with metabolic disorders like diabetes. By uncovering how cancer and metabolism are connected, we move one step closer to more personalized and effective therapies," said corresponding author Gerald V. Denish, Ph.D., Msc, Shirley Prostate cancer Research Professor and Professor of Pharmacology, Physiology and Biophysics.

Regearcher collected exosomes from fat cells and studied how the micro RNAs they contain worsen TNBC cell behaviour. They then added these exosomes to cancer cells in lab experments and experimental models of breast cancer metastasis and observed dangerous changes in their growth, movement, ability to survive under stress and colonize the brain. They found that micro RNAs, which are involved in many biological processes, including cell differentiation and insulin secretion, are carried in

Scanned with CamScanner

breast cancer, especially brain metastasis.

Researchers also analysed breast cancer patient data to see how these microRNAs are linked to cancer progression. The novel patterns found in models directly predict breast cancer patient survival and help explain why some patients with obesity-driven insulin resistance and diabetes experience worse breast cancer outcomes and suggest a new way to target the disease.

"Our study highlights the growing understanding that cancers does not develop in isolation, it is influenced by a person's overall health, including metabolic condition like diabetes. This problem is urgent because the epidemic of obesity-driven diabetes is worsening and now affects over 537 million adults worldwide. This finding adds to the idea that treating underlying conditions, not just cancer itself, could improve patient outcomes," said Denis, who also is co-director of the BU-BMC cancer center.

Other BU researchers who worked on this study include graduate research assistants Yuhan Qiu, Andrew Chen and Pablo Lleuenes, Michael Seen, MS, Naomi Y. Ko, MD, MPH and Stefano Monti, Ph.D.

## 2. The Nordic Region comes together

Christianity brought a new cultural flow to the Nordic Region. Large churches like the cathedrals in Stavanger and Ribe were built, as were monasteries and bishoprics as far away as West Greenland. Market towns were established, castles built and new eating habits and fashion trends introduced thanks to the growing commerce with towns and countries further south.

The South provided not only exciting new stimuli, but also disease, like Black death. This had serious consequences and almost wiped out the Population of Norway and Iceland. It's unclear whether it was the Plague that triggered the demise of the Nordic Greenlanders, but we know that the Nordic civilization in West Greenland died out in the early fifteenth century. It wasn't until three centuries had Passed that contact was restored between Greenland and the rest of the Nordic Region.

During the Middle Ages, the Nordic Region's Position as a cultural, economic, and Politi-cal entity was reaffirmed. During the Middle Ages, the Nordic Region's Position as a cultural, economic and Political entity was comfirmed - in 1397 Denmark, Norway and Sweden merged to form the Kalmar Union - essential a Nordic Empire. The Union also comprised the old Norwegian overseas dependencies of the Shetlands, the orkney Islands, which were under Swedish rule during the Middle Ages. The map of the Kalmar Union roughly resembles that of the Kalmar Union roughly resembles that of the Nordic Region we know today.

The Union between the Nordic countries was relatively strong in it's early years; however their ties gradually weakened and were dogged by internal strife between Denmark and Norway on one side and Finland and Sweden on other - the Kalmar Union finally split down the middle, which was followed by a Period of unrest - not helped by the infamous Stockholm bloodbath of 1520 when the Danish king christian II had a large group of the nobility and other Prominent citizens executed in the Swedish capital in an attempt to retain Power over Sweden.

3. The Future of Artificial Intelligence.

Artificial Intelligence (AI) is evolving rapidly and should have a significant impact on society in the near future. The future of AI is likely to be shaped by a combination of technological advancements, increased investment, and changing societal attitudes towards the technology.

One of the most significant areas of growth for AI is expected to be in the field of machine learning. Machine learning algorithms are already being used in a wide range of application, from self-driving cars to medical diagnosis. As these algorithms become more sophisticated and data becomes more widely available, machine learning is expected to become an even more powerful tool for solving complex problems.

Another area of growth for AI is natural language processing (NLP). NLP is the ability of computers to comprehend and react to human language. This technology is already being used in virtual assistants like Siri and Alexa, and is expected to become even more advanced in future. This could lead to more intelligent chatbots and other NLP-powered applications that can understand and respond to users in a more natural and intuitive way.

AI is also expected to have a major impact on the economy. Some experts predict that AI will lead to significant job displacement, as machine will be able to perform many tasks that are currently done by humans. However, other experts argue that AI will create new jobs and opportunities, particularly in the fields of data analysis and machine learning. When it comes to health care, AI has the potential to revolutionize how we diagnose and treat disease. Machine learning algorithms can be trained to identify patterns in medical image that are too subtle for human doctors to detect. AI can also be used to analyze large amount of data from electronic health records, which could lead to more accurate diagnosis and personalized treatment plans.

One potential concern with AI is the risk of a "singularity" event, where machine become more intelligence that humans and are able to improve themselves at an exponential rate. While this is still a topic of debate among experts, it is important to consider the potential risks and ethical implications of AI as the technology continue to advance.

Scanned with CamScanner

Currently, the demand for artificial intelligence (AI) in industry is driven by a need for automation, improved decision-making and the ability to process and analyse large amounts of data. Some of the key industries and as technology continues to advance, the application for AI will likely expand to other areas as well. As the technology advances, the application for it will become more accessible to small and medium-sized business, and it will be important for companies to stay informed about the latest developments and how they can leverage AI to improve their operations and compete in the market.

In conclusion, the future of AI is expected to be characterised by significant technological advancements, increased investment and expanding application across various industries. It is important for society to be aware of the potential risks and benefits of AI and to approach the technology with a sense of responsibility.

4. The Masai People.

Maasai (not masai) is the correct spelling of this noble tribe. It means People Speaking maa. Masai was the incorrect spelling of the British settlers and has remained in current use - The maasai have always been special. Their bright red robes set them apart visually - Spear in hand, they are calm and courageous regardless of the danger.

The armed British troops who drove the maasai from their lands in the early 20th century had great respect for these fearless tribalism, the only way for a maasai boy to achieve warrior status was to single-handedly kill a lion with his spear.

This is a home for East Africa's most iconic wildlife including: lions, elephant, leopards, Zebra and giraffes. The land contains important resources not just for the people of Kalu, but the habitat reserves, forests that are carbon sinks and rivers and spring supply fresh water to more 4 million people living in and around the port city of Mombasa, Kenya's second largest city.

Kenya recognizes over fifty tribes of native people - The Maasai were the dominating tribes at beginning of 20th century · they are one of the very few tribes who have retained most of their traditions, lifestyle and lore. In common with the wild life with which they co-exist, the maasai need alot of land. Unlike many other tribes in Kenya, the maasai are semi-nomadic and Pastoral: they live by herding cattle and goats.

The Maasai have not fared well in modern Africa - Until the European Settlers arrived, fierce maasai tribes occupied the most fertile lands. The maasai Struggled to preserve their territory, but their spears were no match for armed British troops and their lazy lawyers never had a fair chance in British courtrooms. In 1904, the Maasai signed a first agreement, losing the best of their land to the European Settlers.

Seven years later in 1911, a very controversial agreement was signed by small group of maasai, where their best Northern Land (Laikipia) was given up to white settlers. Surely they did not fully understand what the consequences of such a

Scanned with CamScanner

a treaty were, and anyway the signatories did not represent the entire tribe. With these two treaties, the Maasai lost about two-thirds of their land and were relocated to less fertile parts of Kenya and Tanzania.

Other tribe of Kenya have adapted more readily to the "Progress" of modern times. In contrast, the maasai have persisted in their tradition ways, so as Kenya takes more land for growing tribes and agriculture, they suffer.

Lions are disappearing species: their number plunged from 100,000 ten years ago, to about 17,000 today. Maasai Wilderness Conservation Trust has pioneered a compensation program, reimbursing livestock killed by lion (and other predators). The Program is supported by Campi ya Kanzi tourist conservation fees and employs warriors as lion scouts. In the past, the Maasai and the wildlife simply lived together, in balance. If this could be re-established by showing to the Maasai the economic value of the presence of wildlife in their land, the future of the land of the wildlife and of the Maasai people will be assured.

5. The Twelve Huntsmen.

There was once a king's son who had a bride whom he loved very much. And when he was sitting beside her and very happy, news came that his father lay sick unto death and desired to see him once again before his end. Then he said to his beloved: " I must now go and leave you, I give you ring as a remembrance of me. When I 'am king, I will return and fetch you; so he rode away, and when reached his father, the latter was dangerously ill, and near his death. He said to him: " Dear son, I wished to see you once again before my end, Promise me to marry as I wish; and he named a certain king's daughter who was dying and said; yes, dear father your will shall be done: and the emperor the kind shut his eyes, and died.

When therefore the son had been proclaimed king, and the time of mourning was over, he was forced to keep the promise which he had given his father, and caused the king's daughter to be asked in marriage and she was promised to him. His first betrothed heard of this and fretted so much about his faithfulness that she nearly died. Then her father said to her: " Dearest child, why are you so sad? you shall have whatsoever you will; She thought for a moment and said: 'Dear father, I wish for eleven girls exactly like myself in face, figure and size.' The father said: ' If it be possible, your desire shall be fulfilled and he caused a search to be made in his whole kingdom, until eleven found maidens were found who exactly resembled his daughter in face, figure and size.

When they came to the king's daughter, she had twelve suits of huntsmen's clothes made, all alike and the eleven maidens had to put on the huntsmen's clothes and she herself put on the twelfth suit. Thereupon she took her leave of her father and rode away with in them and rode to the court of her former betrothed, whom she loved so dearly. Then she asked if he required any huntsmen and if he would take all of them into his service. The king looked at her and did not know her, but as they were such handsome fellows, he said: 'yes' and that he would willingly take them and now they were the king's twelve huntsmen.

Scanned with CamScanner

The king, however, had a lion which was a wondrous animal, for he knew all concealed and secret things. It come to pass that one evening he said to the king: 'you think you have twelve huntsmen?" 'yes,' said the king, 'they are twelve huntsmen' the lion continued: 'you are mistaken, they are twelve girls.' The king said: 'Then cannot be true! How will you prove this to me?' 'oh, just let some peas be strewn in the ante-chamber,' answered the lion 'and then you will soon see. Men have a firm step, and when they walk over peas none of them stir, but girls trip and skip and drag their feet and the peas roll about;' the king was well pleased with the counsel and caused the peas to be strewn.

The twelve huntsmen always followed the king to the chase, and his liking for them continually increased. Now it come pass the once when they were out hunting, news came that the king's bride was approaching. When the true bride heard that, it hurt her so much that her heart was almost broken and she fell fainting to the ground. The king thought something had happened to his dear huntsman, ran up to him, wanted to help him, and drew his glove off. Then he saw the ring which he had given to the first bride, and when he was looked in her face he recognised her. Then his heart was so touched that he kissed her, and when she opened her eyes he said: 'you are mine and I am yours, and no one in the world can alter that;' he sent a messenger to the other bride, and entreated her to return to her own kingdom for he had a wife already and someone who had just found an old key did not required a new one. Thereupon the wedding was celebrated, and the Lion was again taken into favour, because, after all, he had told the truth.
